

# Yellowstone County Schools Weekly Report 10.27.2020

Week reviewed 10.18.2020-10.24.2020

The Unified Health Command Medical Technical team, with representatives from Billings Clinic, St. Vincent Healthcare and RiverStone Health, makes weekly recommendations to education leaders about in-person instruction based on four major indicators. If three of the four indicators are red, a strong recommendation will be made to consider switching to distance-learning only. Duration of recommendation depends on local factors.

## Current Recommendation: **Yellow**

Modified in-school attendance (as currently in place) is acceptable.

### Indicators:

1. Capacity of Healthcare and Public Health: **Yellow (Trending: Worse)**

**Situation:** Both healthcare systems are experiencing high volumes of patients requiring hospitalizations of Yellowstone County residents and individuals from the surrounding region. There is surge capacity for inpatients, ICU patients, and ventilated patients. Public Health continues to expand services and personnel, but capacity for timely case investigation and contact tracing is extremely challenged with current case rates.

2. Weekly Case Mix and Clusters: Increase in new cases in children under 19 & clusters in schools: **Yellow (Trending: Worse)**

**Situation:** This past week (10.18.2020-10.24.2020) showed an increase with the number of new cases involving children under age of 19. For children 14-19, the number of new cases more than doubled from 43 cases to 93 cases. There continues to be some clusters of school cases.

October 27, 2020

### New Cases of School Age

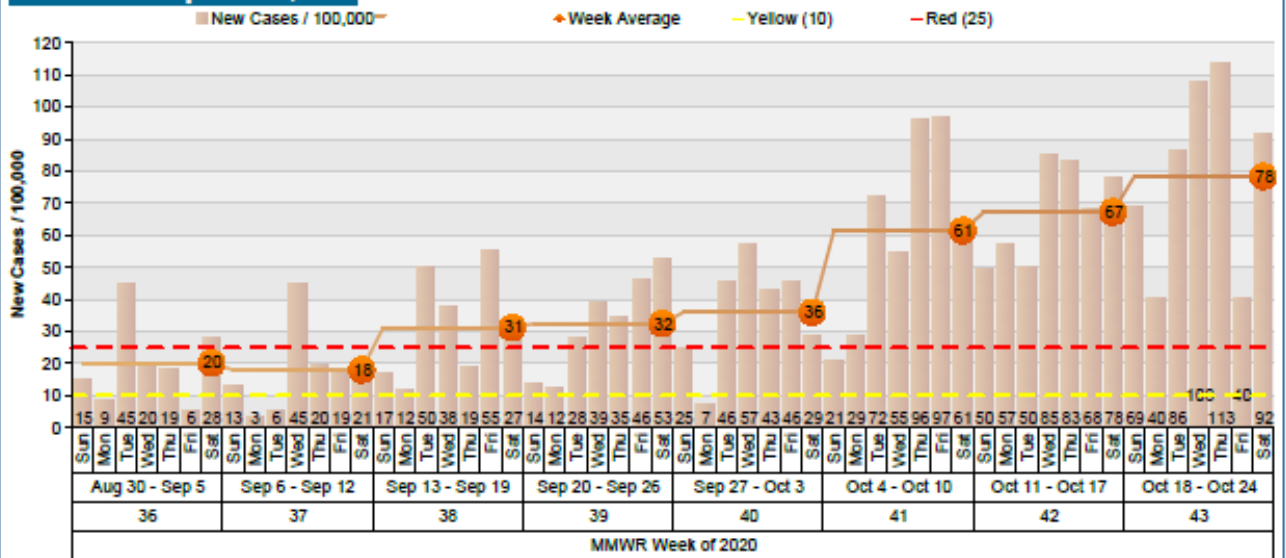

New cases among Yellowstone County school-age children are grouped into color-coded categories based on ages from preschool (0-5) through high school (14-19).

- 3. Weekly Average Daily Case Count per 100,000: **Red (Trending: worse)**  
**Green <10; Yellow 10-25; Red >25 Currently: 78**

**Situation:** This indicator continues to remain red due to five weeks in a row of being over the threshold of 25 cases per 100,000. This past week (10.18.2020-10.24.2020) there was an increase from the previous week (10.11.2020-10.17.2020).

### New Cases per 100,000

The number of new cases each day, per 100,000, is shown as a bar graph. The brown line represents the weekly average daily case count per 100,000. This figure comes from the number of cases per day, divided by 161,300 (population of Yellowstone County), multiplied by 100,000, averaged over a 7-day period. The yellow dotted line indicates 10 new cases per 100,000. The red dotted line indicates a threshold of 25 new cases per 100,000. The orange dot is the average of new cases per 100,000 for the previous 7-day period.

4. Weekly Yellowstone County test positivity rate: **Red (Trending: worse)**

**Green <5; Yellow 5-10; Red >10 Currently: 18.94%**

**Situation:** This indicator remains red and is trending worse with an increase in the positivity rate over this past week (10.18.2020-10.24.2020) compared to the previous week (10.11.2020-10.17.2020). The positivity rate is above the threshold for red three weeks in a row.
