Detailed Instructions: Am I A Close Contact to Someone with COVID-19?

You can be exposed to COVID-19 when you have been in direct contact with the secretions (droplets) of someone who has COVID-19 (being coughed or sneezed on, kissing, sharing utensils, etc.). Close contact means that you have been within six feet of someone with COVID-19 for 15 minutes in a 24 hour period and you had that close contact when the person had symptoms or had tested positive, or 2 days before then. Some people get COVID-19 without knowing how they were exposed.

I have been in close contact with someone who has COVID-19, but I am not sick. What should I do?

- *If you are not yet fully vaccinated, you need to stay home and away from other people.* Do not go to work, school, grocery shopping or do other errands. Your quarantine begins on the last day that you had contact with the COVID-19 positive person. You should monitor yourself for fever, cough, shortness of breath and any other symptoms of COVID-19 (such as chills, muscle aches, fatigue, headache, sore throat, new loss of taste or smell, vomiting or diarrhea).

How long do I have to quarantine if I have no symptoms of COVID-19?

- *Ideally, it’s recommended that you stay home and away from other people, including members of your household, for a full 14 days.*

Is there an option to shorten my quarantine from 14 days, so I can go back to my regular activities sooner?

- *While quarantining for the full 14 days is the best option to prevent the spread of COVID-19, the Centers for Disease Control and Prevention offers an option to shorten the length of quarantine for contacts who have no symptoms.*

- *If you have NO SYMPTOMS, you can end your quarantine after 10 days without any further testing. You need to continue to self-monitor through Day 14, following correct and strict mask usage, social distancing and all other hygiene measures.*

- *If you have NO SYMPTOMS, you can end your quarantine after Day 7, if you...*
test negative on Day 5 or later with a PCR test or have a negative antigen test on Day 7. You need to continue to self-monitor through Day 14, following correct and strict mask usage, social distancing and all other hygiene measures.

- **You cannot end your quarantine earlier than Day 7, even if you have no symptoms.**

**Do I have to quarantine if I’m fully vaccinated for COVID-19?**

Close contacts who are fully vaccinated do not have to quarantine if they meet all of these conditions:

- They are fully vaccinated and at least 2 weeks since the final vaccine dose
- AND are within 3 months of receiving their final dose
- AND do not have COVID-19 symptoms since their exposure to a person who tested positive for COVID-19.

Fully vaccinated people should still watch for symptoms of COVID-19 for 14 days following an exposure. If the fully vaccinated close contact is your caregiver or a household member, the close contact should still follow all of the precautions outlined for household members including: staying in a separate room and using a separate bathroom if possible, mask wearing, maintaining physical distancing, and following disinfecting and proper hygiene guidelines. You can find “**Detailed Instructions if You Live with Someone Who Has Tested Positive for COVID-19**” along with other guidance for close contacts at covid.riverstonehealth.org

The above quarantine guidance for vaccinated people does not apply to long-term care facilities, but it does apply to healthcare workers outside of long-term care facilities.

**I am a close contact of someone who has COVID-19 and now I’m sick. What should I do?**

- Continue to stay home and isolate yourself from other people, including household members, even if your symptoms are very mild. Contact your healthcare provider or go to the community-testing site to be tested for COVID-19. Tell your provider or the testing site that you were exposed to someone with COVID-19 and are now sick.
