The Unified Health Command Medical Technical team, with representatives from Billings Clinic, St. Vincent Healthcare and RiverStone Health, makes weekly recommendations to education leaders about in-person instruction based on four major indicators. If three of the four indicators are red, a strong recommendation will be made to consider switching to distance-learning only. Duration of recommendation depends on local factors.

**Current Recommendation:** **Yellow**

Modified in-school attendance (as currently in place) is acceptable.

**Indicators:**

1. **Capacity of Healthcare and Public Health:** **Green (Trending: Improvement)**
   **Situation:** Both healthcare systems have experienced a reduction in patients requiring hospitalizations from COVID-19. Hospitalizations still include both Yellowstone County residents and individuals from the surrounding region. There is surge capacity for inpatients, ICU patients, and ventilated patients. Public Health continues to expand services and personnel for timely case investigation and contact tracing and is seeing improvements with the new electronic systems that have been implemented.

2. **Weekly Case Mix and Clusters:** Increase in new cases in children under 19 & clusters in schools: **Yellow (Trending: Improvement)**
   **Situation:** This past week (02.28.2021-03.06.2021) showed a decrease of new cases involving children under age of 19 and a decrease with the case mix compared to the previous week. Please note during Week 4 of 2021, Yellowstone County reconciled and recorded an increase of 209 COVID-19 positive cases dating back to October 2020. This reconciliation of positive cases is due to a lapse in reporting between testing labs and the Montana Department of Public Health and Human Services.
3. Weekly Average Daily Case Count per 100,000: **Yellow** (Trending: Improvement)

**Green <10;  Yellow 10-25; Red >25 Currently: 10**

**Situation:** This indicator was red due to eighteen weeks in a row of being over the threshold of 25 cases per 100,000. This past week (02.28.2021-03.06.2021) there was a decrease from the previous week (02.21.2021-02.27.2021). This indicator is yellow this week. Please note during Week 4 of 2021, Yellowstone County reconciled and recorded an increase of 209 COVID-19 positive cases dating back to October 2020. This reconciliation of positive cases is due to a lapse in reporting between testing labs and the Montana Department of Public Health and Human Services. With this reconciliation, the cases per 100,000 for this week is 42 as indicated on the chart below, however “new” cases were recorded at the rate of 24/100,000/day.
4. Weekly Yellowstone County test positivity rate: **Green** (Trending: improvement)

**Green <5; Yellow 5-10; Red >10**  **Currently: 3.22%**

**Situation:** There was a decrease in the positivity rate over this past week (02.28.2021-03.06.2021) compared to the previous week (02.21.2021-02.27.2021). The positivity rate has been above the threshold for red ten weeks in a row until week (12.06.2020-12.12.2020) and the again the week of (12.27.2020-01.02.2021). This indicator will change to green this week for the rate being under 5% two weeks in a row. Please note during Week 4 of 2021, Yellowstone County reconciled and recorded an increase of 209 COVID-19 positive cases dating back to October 2020. This reconciliation of positive cases is due to a lapse in reporting between testing labs and the Montana Department of Public Health and Human Services. With this reconciliation, the number of COVID tests were reconciled as seen on the chart below, noting that the very large number of tests is due to the recognition of old tests and cases.
